1. Problem Statement

Pet owners often find it difficult to access reliable and organized information about caring for their pets. Details about vaccination schedules, nutrition, grooming, and common health issues are scattered across many different websites, making it time-consuming to find trustworthy answers. New and first-time pet owners especially struggle to know what their pet needs at different life stages. There is a need for a simple, centralized web application that brings together essential pet care information in an easy-to-understand and accessible format, helping owners take better care of their pets.

2. Objectives

- To build a simple React web app that provides pet care information in one place.
- To allow users to search and view care guides based on pet type and breed.
- To display vaccination schedules and reminders for different pets.
- To provide nutrition and feeding guidance suited to a pet's age and type.
- To use React basics like components, state, and hooks in the project.
- To give simple grooming and health tips based on the selected pet category.

3. Functional Requirements

ID	Requirement	Description
FR-1	Search Pet/Breed	User can search or select a pet type/breed to view care information.
FR-2	Care Guide Display	App shows a general care guide for the selected pet.
FR-3	Vaccination Schedule	App shows recommended vaccination timeline for the pet.
FR-4	Nutrition Guidance	App shows feeding and nutrition tips based on pet age/type.
FR-5	Grooming Tips	App displays grooming and hygiene tips for the pet.
FR-6	Reminders	User can set simple reminders for vaccination or feeding schedules.
FR-7	Loading/Error	App shows a loading message and error message if needed.

4. UI Design

The app has one main page with the following simple sections:

- Navbar – App name at the top.
- Search Box – To select or search a pet type/breed.
- Pet Profile Card – Shows basic details of the selected pet.
- Care Guide Section – Displays general care information.
- Vaccination Schedule Table – Lists upcoming and due vaccinations.
- Nutrition & Grooming Box – Shows feeding and grooming tips.
- Reminder Box – Displays reminders set by the user.

Component structure planned for the app: *App → Navbar, SearchBar, PetProfileCard, CareGuide, VaccinationSchedule, NutritionTips, ReminderBox, Footer*

Pet Age Group	Life Stage	Care Focus
0–6 months	Puppy/Kitten	Vaccination & Growth Nutrition
6 months–2 years	Young Adult	Training & Balanced Diet
2–7 years	Adult	Regular Checkups & Exercise

7+ years	Senior	Special Diet & Health Monitoring
----------	--------	----------------------------------

5. React Project Plan

Tools Used

- React.js (with Vite) and JavaScript (ES6+)
- Axios – to call the pet data API
- React Router – for navigating between pet categories
- Public Pet API (e.g., Dog CEO API / TheCatAPI) – for pet breed data

Planned Files

src/components: Navbar, SearchBar, PetProfileCard, CareGuide,
VaccinationSchedule, NutritionTips, ReminderBox

src/services: petCareApi.js

src/App.jsx, src/main.jsx

6. Demonstration of Implemented Modules

Module	Status
Project setup (React + Vite)	Done
Navbar and Search Box	In Progress
API connection for pet data	In Progress
Pet Profile Card display	In Progress
Vaccination Schedule table	Planned
Nutrition & Grooming tips section	Planned

7. Progress Report

Week	Work Done	Status
Week 1	Chose topic, wrote problem statement and objectives.	Done
Week 2	Designed UI layout and component structure.	In Progress

Week 3	Set up React project, built Navbar and Search Box.	In Progress
Week 4	Connecting API and building Pet Profile Card.	In Progress
Week 5	Add vaccination/nutrition sections, complete styling, prepare for demo.	Planned

Challenges Faced

- Finding a free and reliable pet breed/care API.
- Organizing care information clearly for different pet types and ages.

What I Learned

- How to use React state and hooks.
- How to fetch data from an API and display it on screen.

Plan for Next Phase

- Finish the vaccination schedule and nutrition tips sections.
- Add reminder functionality.
- Improve the design and test the app.
- Prepare for final demo.
